**HAYMAN**

QUALITY BUILT SAFES

40 YEARS STRONG

Not all dangers wear a mask and steal in the night. Sometimes we must protect from natural dangers such as FIRE. The FlameVault by Hayman is the highest level of protection for those types of threats.

Built using modern technology and materials, The FlameVault by Hayman protects papers, documents, photos and more through a unique procedure. Instead of a traditional mud slurry mixture that others use to trap water in the walls of their fire safes, FlameVault uses a monolithic pour that contains air chambers. These chambers expand and release with the heat of a fire and prevent that heat from transferring to the inside and to the valuables. The walls of the FlameVault are totally dry and strong when finished, and are safe for storing any fire sensitive items.

Our 1&2 hour fire safes are tested to the highest standards in the industry. When heated to over 1800deg for our 2 hr safes & 1700deg for our 1 hr safes the safes were dropped onto rubble from a height of 13 ft, then reheated to insure proper protection to the contents. The FlameVault by Hayman will give you the peace of mind you want for irreplaceable and un-insurable valuables and records.

- Durable painted finish provides an attractive look that is easy to clean.
- User programmable electronic code for digital lock.
- Strong and reliable construction

# FlameVault

**1 hour & 2 hour record safes**

# FlameVault

Available From:

## 1 hour & 2 hour record safes

With our **1 hr fire safes** you have a choice of combination or electronic lock to secure your valuables. Note the attractive tri-spoke handle on the combination lock giving you the feel of a bank vault. The electronic lock will allow you to change your own access pin as you see fit.

- Removable drawer standard on all models
- Tri-spoke handle for ease of opening
- 1 hour certified fire protection
- 3 sizes to choose from fits your individual requirements.

**C = non changeable combo lock / E = import electronic lock**

Our **2 hr fire safes** provide access control with a fast electronic lock or a mechanical dial with high security key lock. The electronic lock allows fast, easy access and the ability to control the combination yourself. The high security key lock on mechanical models is the same as used on the high end European cars and provides valuable key control in commercial applications.

FV-2120C
